

Constant Monitor - Capacitive ESD

SKU: 106-104

Features & Benefits

- Compatible with standard wrist strap and cord for continuous monitoring
- Body mass adjustment for individual user setup
- Can be mounted on or under the workbench for easy access
- Available with a European plug for global compatibility
- All cords must be un-coiled for proper functionality
- The monitor features a body mass adjustment for individual user setup, making it adaptable to different users' needs

About the Constant Monitor - Capacitive ESD

The Constant Monitor - Capacitive ESD is designed to provide continuous monitoring of ESD safety systems in static-sensitive environments.

Compatible with a standard wrist strap and cord, it offers reliable monitoring of the earth-to-ground connection, work mat to earth connection, and wrist strap connection to ensure that all ESD protective equipment is functioning correctly.

The monitor features a body mass adjustment for individual user setup, making it adaptable to different users' needs.

It can be conveniently mounted on or under the workbench for easy access and monitoring.

The monitor requires that all cords be un-coiled for optimal operation, ensuring accurate and reliable performance.

This unit is also available with a European plug for international use.

Additionally, each unit comes with a 1-year calibration certificate, providing peace of mind for users who need certified equipment for their ESD control systems.
