

Earth Facility Bracket - 10mm Stud

SKU: 101-091-4

Features & Benefits

- ◆ Earth Facility Bracket with **10mm stud** for grounding applications
- ◆ Ideal for earth bonding points in Electrostatic Protected Areas (EPAs)
- ◆ Distributes static discharge via electrical mains earth or dedicated ESD earth
- ◆ No resistor included, suitable for installations without additional resistance
- ◆ Ensures reliable ESD protection and safe static discharge in industrial environments
- ◆ Designed to meet ESD safety standards for sensitive equipment

About the Earth Facility Bracket - 10mm Stud

The Earth Facility Bracket with a 10mm stud is designed for easy and reliable connection to earth bonding points within an Electrostatic Protected Area (EPA).

Unlike traditional grounding systems, the Earth Facility (EF) distributes static discharge through the electrical mains earth or a dedicated ESD earth to maintain the integrity of your ESD safe environment.

This bracket is ideal for use in industrial and manufacturing settings where effective static control is essential. The **10mm stud** provides a secure connection for grounding mats, workstations, and other equipment, helping to ensure consistent ESD protection.

The unit does not include a resistor, making it a suitable choice for installations where additional resistance is not required.
