

Earth Facility Bracket - M5 Post

SKU: 101-091-3

Features & Benefits

- ◆ Earth Facility Bracket - M5 Post for reliable grounding
- ◆ Distinguishes between earth facility and earth bonding point within an EPA
- ◆ Connects to electrical mains earth or a dedicated ESD earth for optimal static discharge management
- ◆ No resistor included, ideal for installations that do not require additional resistance
- ◆ M5 post for secure, durable connections
- ◆ Ensures safe ESD protection in static-sensitive environments
- ◆ Perfect for electronics, manufacturing, and other ESD critical applications

About the Earth Facility Bracket - M5 Post

The Earth Facility Bracket - M5 Post is designed for use in Electrostatic Protected Areas (EPAs) to provide a secure and reliable grounding solution.

This bracket is distinguished from typical earth bonding points, as it connects to an earth facility (EF), which distributes static discharge via the electrical mains earth or a dedicated ESD earth (protective earth).

It is ideal for environments that require robust static control and grounding across multiple workstations. The M5 post ensures a solid and durable connection, making it suitable for industrial and manufacturing settings.

This unit does not include a resistor, providing a direct grounding path where additional resistance is not necessary.
