

Heel Grounders - Disposable (100/Pack) ESD

SKU: 101-109

Features & Benefits

- ◆ Disposable heel grounder for temporary workers and visitors in static-sensitive environments
- ◆ Made from antistatic fabrics with conductive yarn to maintain effective electrical contact with the ground
- ◆ Built-in 1M Ohm resistor for reliable ESD protection and static discharge control
- ◆ Surface resistivity of 10^5 /sq for optimised static dissipation
- ◆ Economic and non-marking design, ideal for cleanroom environments and ESD-critical applications
- ◆ Comfortable to wear and easy to use, providing reliable protection for short-term use in controlled areas

About the Heel Grounders - Disposable (100/Pack) ESD

The Disposable Heel Grounder is designed for visitors and temporary workers who need to enter static-controlled environments such as cleanrooms or ESD-sensitive areas.

Manufactured from antistatic fabrics, these heel grounders offer safe and effective resistance to static build-up. The conductive yarn woven into the fabric ensures consistent electrical contact between the ground and the wearer's body, optimising static dissipation and providing reliable ESD protection.

Each heel grounder is equipped with a built-in 1M Ohm resistor, ensuring that it meets safety standards for static discharge control.

Easy to use, comfortable to wear, and designed for economic cost, the disposable heel grounder is perfect for short-term use while offering effective protection against electrostatic discharge (ESD) in cleanroom and ESD-critical environments.
