

# Humidity Indicator Cards

SKU: 101-000 | Sizes: 3 Spot (125/Pack), 4 Spot (100/Pack), 6 Spot (200/Pack)

## Features & Benefits

- ◆ Used to determine if products have been exposed to moisture beyond recommended levels
- ◆ Conforms to IPC/JEDEC 033 standard for accurate moisture detection
- ◆ Cobalt Dichloride Free, compliant with RoHS, REACH, and WEEE directives
- ◆ **Available in Four Spot (10%, 20%, 30%, 40%) and Six Spot (10%, 20%, 30%, 40%, 50%, 60%) versions**
- ◆ Packed in airtight containers to maintain card effectiveness
- ◆ **Quick visual inspection:** spots change from blue to pink when humidity is present
- ◆ Verifies the effectiveness of moisture barrier packaging

## About the Humidity Indicator Cards

**Humidity Indicator Cards are designed to monitor and determine if products have been exposed to moisture levels exceeding recommended storage conditions.**

These cards provide an easy and effective way to assess the moisture exposure of sensitive electronic components, ensuring they remain within safe, humidity-controlled environments during storage and transport.

Conforming to the IPC/JEDEC 033 standard, these cards are Cobalt Dichloride Free, making them compliant with RoHS, REACH, and WEEE directives regarding hazardous substances.

**The cards are available in both Four Spot (10%, 20%, 30%, 40%) and Six Spot (10%, 20%, 30%, 40%, 50%, 60%) versions,** allowing flexibility based on the specific needs of your application.

Packed in airtight containers, the cards maintain their accuracy and effectiveness. They work by providing a quick visual inspection—the spots on the card change from blue to pink when exposed to moisture, offering an immediate indication of humidity presence and ensuring the effectiveness of moisture barrier packaging.

These Humidity Indicator Cards provide a simple, effective, and compliant solution for monitoring humidity exposure, ensuring static-sensitive and moisture-sensitive components remain protected.
