

Large - L Shaped Rack 25 Slots ESD

SKU: 109-100-2L

Features & Benefits

- ◆ Robust moulded PCB racks made from conductive polypropylene for ESD-safe storage of printed circuit boards (PCBs)
- ◆ **Stackable design** for space-saving storage in assembly areas
- ◆ **Electrical resistance:** Rv: 103 to 105 Ω for effective ESD protection
- ◆ Provides a conductive path to ground in static-controlled product areas
- ◆ Ideal for use with conductive picking bins, Euro-Fix containers, and for transport stacking
- ◆ RoHS and REACH compliant, ensuring safety and environmental standards
- ◆ Manufactured in the UK for premium quality and reliability

About the Large - L Shaped Rack 25 Slots ESD

The PCB Conductive Rack offers a robust and space-saving solution for storing and handling printed circuit boards (PCBs) in ESD-controlled environments.

Moulded from black conductive polypropylene, these racks provide an effective way to store and transport PCBs while ensuring electrostatic discharge (ESD) protection.

With dimensions of **255mm width x 350mm length x 130mm height**, these racks are designed to accommodate PCBs with a maximum board thickness of 2.4mm.

The stackable design allows for efficient storage, while the conductive material ensures a safe path to ground in static-controlled areas.

The electrical resistance of Rv: 103 to 105 Ω guarantees reliable ESD safety.

These racks can be used in conjunction with conductive picking bins, Euro-Fix containers, and for transport stacking.

Ideal for PCBs storage, handling, and transportation in electronics manufacturing or assembly areas, these racks are RoHS and REACH compliant and manufactured in the UK for high-quality standards.

Specifications

Property	Detail
Maximum board thickness	2.4mm (dimensions: 255mm x 350mm x 130mm)
Temperature	750°C
Application	ESD-protected areas, electronics mfg, cleanrooms
