

Peelable Coating Mask 250ml

SKU: 301-150

Features & Benefits

- ◆ Flexible latex for masking components
- ◆ Manual removal, leaving no residue
- ◆ Solvent resistant
- ◆ Does not contaminate conformal coatings
- ◆ Dries at room temperature
- ◆ High film strength, does not break easily
- ◆ Can be accurately applied using automated dispensing machines
- ◆ Standard formulation, supplied in **250ml bottles**
- ◆ **Electrolube type PCM250ML**

About the Peelable Coating Mask 250ml

Electrolube PCM is a flexible, solvent-resistant latex for masking components, connectors and other items during wave soldering and conformal coating processes.

PCM ensures that sensitive items and areas requiring further processing are not coated. It is particularly suitable for protecting areas from ingress of conformal coating, e.g. pin connectors, adjustable pots, IC sockets etc. It is also suitable as a spot mask for wave soldering applications.

The high film strength of PCM means that it can be peeled by hand without breaking or leaving residues.
