

# Surface Resistance Meter ESD

SKU: 106-103

## Features & Benefits

- ◆ Measures both surface resistivity and resistance to ground
- ◆ Portable and easy-to-use design for on-the-go testing
- ◆ Works with 10V/100V settings for versatile testing
- ◆ Powered by a 9V battery for convenience
- ◆ Includes a carrying pouch for safe storage and portability
- ◆ Ideal for ESD control and resistance testing in various industries

## About the Surface Resistance Meter ESD

The Surface Resistance Meter is a portable and easy-to-use instrument designed for measuring both surface resistivity and resistance to ground.

This compact meter operates with 10V/100V settings, allowing precise measurements for a wide range of materials.

Ideal for testing electrostatic discharge (ESD) protection, the device provides reliable readings to ensure compliance with industry standards.

The meter is powered by a 9V battery, making it convenient for on-the-go testing.

It also comes with a protective carrying pouch for easy storage and transport.

Whether you're working in manufacturing, electronics, or ESD-sensitive environments, this meter is the perfect tool for accurate and efficient resistance testing.

## Specifications

Property	Detail
Application	ESD-protected areas, electronics mfg, cleanrooms
