

Weller DXV 80 Desoldering Iron

SKU: GW-DXV80

Features & Benefits

- ◆ 80W, 24V inline desoldering iron, perfect for precise electronics rework tasks.
- ◆ Internal solder reservoir for vertical handling, reducing the risk of contamination and ensuring cleanliness during use.
- ◆ Electronic temperature control for accurate temperature adjustment, ideal for working with various solder materials.
- ◆ Micro finger switch for quick start and fast-action vacuum pump for efficient desoldering.
- ◆ Compatible with a range of interchangeable nozzles and CSF heads, providing flexibility for different component sizes and types.
- ◆ Desoldering nozzle fixture system ensures secure and reliable tool operation.
- ◆ Designed for use with **DX soldering tips** for optimal performance.
- ◆ Ideal for applications that require vertical handling, this tool features an internal solder reservoir that allows for smooth and accurate solder removal without the need for external collection systems
- ◆ This feature significantly reduces response time, allowing for quicker, more efficient desoldering tasks

About the Weller DXV 80 Desoldering Iron

The Weller DXV 80 Desoldering Iron is an 80W, 24V inline desoldering tool designed for electronics rework, providing precise and efficient desoldering capabilities.

Ideal for applications that require vertical handling, this tool features an internal solder reservoir that allows for smooth and accurate solder removal without the need for external collection systems. Whether you are working on small SMD components or larger through-hole connections, the DXV 80 ensures a clean and reliable desoldering process every time.

The electronic temperature control allows for precise adjustment of the temperature, ensuring consistent and optimal performance across various tasks. With the ability to control the temperature easily, you can work with different solder materials, including lead-free and conventional solders, ensuring compatibility with a wide range of applications.

The micro finger switch is designed for quick start and fast action vacuum pump activation, making it easy to control the desoldering process. This feature significantly reduces response time, allowing for quicker, more efficient desoldering tasks.

To enhance the versatility of the tool, the DXV 80 is compatible with different interchangeable nozzles and several CSF heads, providing the flexibility to work on a variety of components and connections. The desoldering nozzle fixture system ensures secure attachment and reliable performance throughout the operation, providing a consistent and safe user experience.
