

Weller WT1012M Soldering Set

SKU: GW-WT1012M

Features & Benefits

- ◆ **Compact and Efficient Design** The WT1012M is a single-channel soldering station with a compact footprint, making it an excellent choice for workspaces with limited space. It delivers powerful performance for tasks ranging from nano to larger micro rework applications, keeping your workspace organised and efficient.
- ◆ **Powerful Performance with RTW Tips** Equipped with Weller's RTW active tips, the WT1012M offers extremely fast heat-up times (just 5 seconds), ensuring that you can quickly tackle demanding soldering and desoldering tasks. The active tip technology helps maintain consistent heat for improved precision and faster project completion.
- ◆ **Versatile Tool Compatibility** The WT1012M is highly versatile, supporting both active tip technology for precision applications and passive tip technology for cost-effective general soldering. This flexibility ensures that you can use the station for a wide range of micro and nano rework tasks with a variety of tools.
- ◆ **Incredible Heat-Up and Recovery Speed** Thanks to 5-second heat-up times with RTW tips, the WT1012M maximises productivity by minimising wait times and ensuring quicker start times for your soldering projects. This rapid heat-up, combined with excellent heat recovery, helps you maintain continuous workflows and complete tasks faster.
- ◆ **Multiple Tool Connections** With the ability to connect 10+ different soldering tools to a single WT1012M station, this soldering kit provides unmatched flexibility. Whether you need high-performance active tips for precision tasks or cost-efficient tools for larger rework projects, the station easily adapts to your needs without the need for multiple devices.
- ◆ **Stackable for Space Efficiency** The WT1012M can be stacked with other WT stations, helping you optimise your workspace while still having access to multiple tools. This stackable design ensures that you can expand your soldering setup without compromising space.
- ◆ **Health and Safety with Fume Extraction** For safer working conditions, the WT1012M can be connected to a Weller ZeroSmog fume extraction unit, ensuring that harmful soldering fumes are efficiently removed from your workspace. This feature protects your health during extended soldering sessions.
- ◆ **Intuitive User Interface** The WT1012M features a graphical, backlit LC display and an easy-to-use interface that helps you navigate through different settings quickly. The clear menu structure and additional features such as OFF time, process window, lock function, and offset adjustment allow you to customise your soldering experience for maximum precision.
- ◆ **Space-Saving Storage Options** The housing cover of the WT1012M can be used as storage for your tools, keeping your workspace clean and organised. The stackable units further enhance space efficiency while ensuring your tools are easily accessible.

About the Weller WT1012M Soldering Set

Weller WT1012M - 1 Channel Rework Kit (95W) – Compact, Powerful, and Versatile for Micro and Nano Rework Applications

The Weller WT1012M Rework Kit is the perfect solution for professionals and enthusiasts working on micro, nano, and pico rework soldering tasks. With ultra-fast heat-up and recovery times, this 95W soldering station is designed to boost your productivity and efficiency. Whether you're desoldering, reworking small components, or tackling precision soldering tasks, this versatile station helps you achieve the highest quality results with ease. Specifications:

- **Power Consumption:** 95W
- **Temperature Range:** 50°C - 450°C / 550°C (depending on tool)
- **Temperature Accuracy:** ±9°C
- **Temperature Stability:** ±2°C
- **Voltage:** 230V / 50Hz
- **Fuse:** 230V (mA)T500
- **Dimensions (L x W x H):** 150 x 130 x 101 mm
- **Weight:** 1.9 kg
- **Mil-Spec:** Yes
- **ESD Safe:** Yes
- **UPC:** 4003019449330

Perfect For:

- Micro and nano rework soldering tasks
- Precision desoldering and reworking components
- Electronics repair and prototype work
- Professional soldering technicians
- Hobbyists and electronics enthusiasts

The Weller WT1012M Rework Kit is your go-to solution for high-precision rework tasks, offering fast heat-up times, compact design, and versatile tool compatibility. Whether you're desoldering tiny components or working on larger micro soldering applications, this kit delivers the flexibility and performance you need to get the job done with precision and speed.

Order the Weller WT1012M Rework Kit today and experience the power of precision soldering!
