

# Weller WXMT Micro-Desoldering Tweezers SET

SKU: GW-WXMT-SET

## Features & Benefits

- ◆ 2 x 40 W, 12 V power for precise and efficient desoldering of small SMD components.
- ◆ Integrated heating element and sensor in the soldering tip for faster reaction times and improved performance.
- ◆ Parallel tip design ensures tips are always in alignment for enhanced accuracy.
- ◆ Automatic shut-off feature for tip protection and longer tip life, extending the tool's overall efficiency.
- ◆ Supplied with RTW 2 soldering triplet (RTW series) for high-quality solder joint work.
- ◆ WDH 60 safety rest with dry cleaner for easy storage and maintenance of tweezers.
- ◆ ESD safe to protect sensitive components from electrostatic discharge.
- ◆ Perfect for lead-free applications, ensuring optimal soldering quality.
- ◆ Compatible with RTW series plug-in style cartridges for easy tip changes and increased tool versatility.
- ◆ Ideal for micro-soldering and SMD rework, the WXMT features an integrated heating element and sensor in the soldering tip, allowing for fast and accurate temperature control at the solder joint.
- ◆ The tips also feature an automatic shut-off function when placed in the WDH 60 stand, which extends their lifespan and ensures the tips are not exposed to unnecessary heat.
- ◆ This feature is particularly beneficial for lead-free soldering applications, as it ensures the tips stay in optimal condition, even with frequent use.

## About the Weller WXMT Micro-Desoldering Tweezers SET

The Weller WXMT Micro-Desoldering Tweezers SET is an advanced tool designed for precise desoldering of very small SMD components.

Ideal for micro-soldering and SMD rework, the WXMT features an integrated heating element and sensor in the soldering tip, allowing for fast and accurate temperature control at the solder joint. This design results in faster reaction times and higher performance, especially when working with delicate, high-density PCB assemblies.

The set includes the WXMT tweezers (2 x 40 W, 12 V), designed for precise desoldering of tiny SMD components, and a WDH 60 safety rest with a dry cleaner, making it easy to maintain and store the tool safely. The RTW 2 soldering triplet (part of the RTW series) comes pre-installed for immediate use, and it offers excellent heat distribution, ensuring efficient desoldering.

The tips used in the WXMT set are parallel in the tip cartridge, ensuring they are always aligned, which significantly improves accuracy and control during desoldering tasks. The tips also feature an automatic shut-off function when placed in the WDH 60 stand, which extends their lifespan and ensures the tips are not exposed to unnecessary heat. This feature is particularly beneficial for lead-free soldering applications, as it ensures the tips stay in optimal condition, even with frequent use.

The WXMT Micro-Desoldering Tweezers are also ESD safe, protecting sensitive electronic components from electrostatic discharge during the soldering and desoldering process.

The RTW series plug-in style cartridges offer easy tip changes and are designed for durability and efficiency, enhancing your productivity and ensuring consistent, high-quality results.
