

Weller W 201 Soldering Iron 200W

SKU: GW-W201

Features & Benefits

- ◆ **Temperature Control:** Magnastat-controlled for stable and consistent heat delivery.
- ◆ **Tip Type:** Supplied with CT2 F7 soldering tip, suitable for a variety of soldering applications.
- ◆ **Durability:** Built for long-term, high-performance use in industrial and professional environments.

About the Weller W 201 Soldering Iron 200W

The Weller W 201 is a line voltage soldering iron offering 200W of power for demanding soldering applications.

Designed with Magnastat control technology, it ensures reliable temperature regulation and performance, making it an ideal tool for tasks requiring high heat.

Ideal For:

- Heavy-duty soldering applications requiring consistent high heat.
- Tasks such as transformer soldering, larger components, and other high-heat applications.

The Weller W 201 is designed to meet the demands of high-power soldering with precise temperature control and consistent performance, making it a dependable tool for professional soldering tasks.

Specifications

| Property | Detail |
|-------------|-----------------------------------------------------|
| Power | 200W |
| Voltage | 230V, designed for standard European power supplies |
| Application | ESD-protected areas, electronics mfg, cleanrooms |
